EDUCATION

Howest University of Applied Sciences

Bachelor of Creative Technologies & Artificial Intelligence (CTAI)

- Coursework: Advanced Deep Learning, Computer Vision, Reinforcement Learning, MLOps, and AI Ethics.

Expected 2027
Kortrijk, Belgium

STEP IT Academy Azerbaijan

Diploma, Programming & IT

2017 – 2023
Baku, Azerbaijan

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript

Machine Learning: PyTorch, TensorFlow, scikit-learn, Computer Vision (CNN, YOLO, OpenCV), NLP/Transformers, RAG and retrieval evaluation, Reinforcement Learning

Data & Infrastructure: Docker, Kubernetes, FastAPI, Flask, MLflow, CI/CD, PostgreSQL, MongoDB, AWS/GCP, Git/GitHub, Linux

Embedded: Arduino, Raspberry Pi, embedded AI, LiDAR and camera sensor fusion

PROJECTS

Explainable Visual Defect Detector

- Reimplemented PatchCore (CVPR 2022) for unsupervised industrial defect detection; 0.987 mean AUROC across all 15 MVTec-AD categories, shipped as a live demo.
- Diagnosed a silent thresholding fault where a 99th-percentile cut-off was estimating the 96th, and documented the categories where the method cannot work rather than tuning around them.

EU AI Act RAG

- Grounded QA system over EU AI Act regulation text; hybrid retrieval reached 90.9% hit-rate@6 and 90.2% answer faithfulness across 45 hand-written evaluation questions.

Fraud Detection & MLOps Pipeline

- Leakage-safe validation on a 590K-transaction dataset, scoring 0.909 private-leaderboard AUC; served via FastAPI, versioned in MLflow, with automated drift monitoring.

Autonomous Drone Navigation

- Built LiDAR/camera sensor-fusion navigation with reinforcement-learning path planning, achieving collision-free routing across simulated high-density urban environments.

EXPERIENCE

Head of IT

Adscreen

- Architected real-time ad-targeting pipelines in Python and TensorFlow across a fleet of 1,000+ edge devices, optimising on-device inference to meet real-time display constraints.
- Built and operate containerised deployments with Docker and Kubernetes, including monitoring and automated recovery for the computer-vision engagement-analytics service.

Jun 2024 – Present
Kortrijk, Belgium

AI Developer / Student Researcher

Howest University of Applied Sciences

- Engineered predictive ML models and transformer-based NLP pipelines for industry-partner research projects.
- Developed computer-vision recognition systems (CNN, YOLO, OpenCV) and C++ simulation modules supporting research experiments.
- Introduced A/B testing and cross-validation protocols to standardise experiment methodology, making results reproducible across partner projects.

Sep 2024 – Jun 2025
Kortrijk, Belgium

Programming Instructor

STEP IT Academy Azerbaijan

- Taught programming and AI to 200+ students; supervised capstone AI projects from data preprocessing through deployment.
- Built 5+ AI-embedded prototypes integrating Python ML models with microcontrollers, used as standard reference projects for student coursework.

Apr 2019 – Dec 2023
Baku, Azerbaijan

LEADERSHIP

Founder & Team Lead — RED RUSH / ARENA FEST

Event Leadership & Entrepreneurship

- Founded and led RED RUSH and ARENA FEST; moved to a remote advisory role in June 2024, delegating daily operations to local management while keeping strategic oversight.
- Led 30+ volunteers as Team Leader at Red Bull F1 and Cars & Coffee events, coordinating directly with brand managers.

Jan – Oct 2024
Baku, Azerbaijan
